**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1, 3-11, and 13-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Pennell et al. ('566). Pennell teaches a system having a foundation or footing (column 5, line 30), a guyed tower attached to the foundation/footing (column 5, line 35), and a pole tower or absorbing means (central pole in Figure 1) attached to the foundation/footing and extending through the middle region of the tower. The pole tower is attached to the guyed tower at a midpoint of one of the sections of the guyed tower sections and at an interface between the guyed tower sections, there is communication equipment attached to the pole tower, the pole tower is sectional and hollow, the guyed tower has a bottom fixed to the foundation/footing and the top of the pole tower has equipment mounted at a point above the top of the guyed tower.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 12, and 19-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pennell et al. ('566). Pennell teaches a system as stated above, but does not state that the pole tower is separated from an inner periphery of the guyed tower by about one-quarter of an inch. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the pole tower about a quarter of an inch from the guyed tower at one point along the system, since discovering an optimum value of a result effective variable involves only routine skill in the art.

Pennell does not recite method steps in supporting the system. However, since all of the structural features have been disclosed or discussed above, the steps of erecting, attaching, lowering, and inserting are considered obvious steps of supporting equipment and increasing the load capacity of a tower.
